Ejercicio 1. Consultar Positivo

Ejercicio 2. Factura eléctrica

Nombre	Número	Resultado
CP1	-1	Error
CP2	0	9
CP3	300	9
CP4	301	8
CP5	600	8
CP6	601	6
CP7	1000	6
CP8	1001	5
CP9	2000	5
CP10	2001	Error

```
import static org.junit.Assert.assertEquals;
public class FacturaTest {
   @Test (expected = NumeroInvalidoException.class)
   public void CP1(){
        Factura fact = new Factura();
        fact.setConsumokWh(-1);
        fact.calcularPrezokWh();
   public void CP2() {
       Factura fact = new Factura();
        fact.setConsumokWh(consumokWh: 0);
        assertEquals(9, fact.calcularPrezokWh());
   @Test
   public void CP3() {
       Factura fact = new Factura();
        fact.setConsumokWh(consumokWh: 300);
        assertEquals(9, fact.calcularPrezokWh());
   @Test
   public void CP4() {
       Factura fact = new Factura();
fact.setConsumokWh(consumokWh: 301);
        assertEquals(8, fact.calcularPrezokWh());
   public void CP5() {
       Factura fact = new Factura();
        fact.setConsumokWh(consumokWh: 600);
        assertEquals(8, fact.calcularPrezokWh());
   public void CP6() {
        Factura fact = new Factura();
fact.setConsumokWh(consumokWh; 601);
        assertEquals(6, fact.calcularPrezokWh());
```

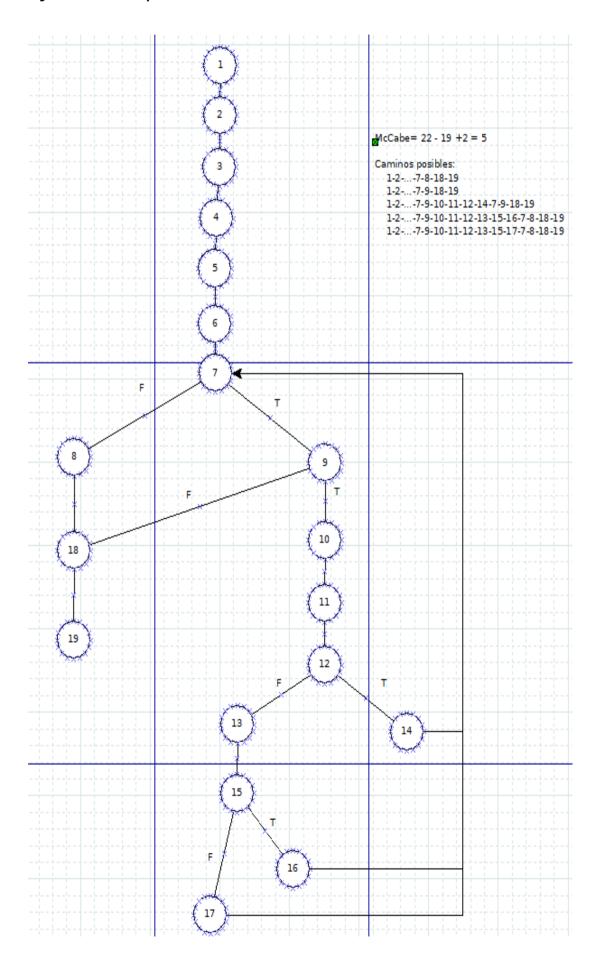

```
public void CP7() {
    Factura fact = new Factura();
    fact.setConsumokWh(consumokWh: 1000);
    assertEquals(6, fact.calcularPrezokWh());
@Test
public void CP8() {
    Factura fact = new Factura();
    fact.setConsumokWh(consumokWh: 1001);
    assertEquals(5, fact.calcularPrezokWh());
@Test
public void CP9() {
    Factura fact = new Factura();
    fact.setConsumokWh(consumokWh: 2000);
    assertEquals(5, fact.calcularPrezokWh());
@Test (expected = NumeroInvalidoException.class)
public void CP10(){
    Factura fact = new Factura();
    fact.setConsumokWh(consumokWh: 2001);
    fact calcularPrezokWh();
```

Hay errorres en el código, las modificaciones requeridas son estas:

```
public int calcularPrezokWh(){
    int prezokWh=0;
    if(consumokWh < 0){
        throw new NumeroInvalidoException();
    }else if (consumokWh<=300){
        prezokWh=9;
    }else if(consumokWh<=600){
        prezokWh=8;
    }else if(consumokWh<=1000){
        prezokWh=6;
    }else if (consumokWh<=2000){
        prezokWh=5;
    }else{
        throw new NumeroInvalidoException();
    }
    return prezokWh;
}</pre>
```
